PROFESSIONAL SUMMARY

Product-minded software engineer with 5+ years of experience across startup and enterprise environments, spanning backend systems, production features, data migration workflows, and marketplace infrastructure. Able to own zero-to-one product execution end-to-end while contributing effectively within large-scale team-based engineering organizations.

EXPERIENCE

Talor | Founding Software Engineer | 02/2026 – Present

- Owned end-to-end product development as the sole engineer, spanning requirements definition, database modeling, Node.js backend development, native iOS implementation, cloud infrastructure, testing, and App Store deployment.
- Designed and implemented core product systems across marketplace transactions, social feeds, messaging, payments, moderation, account lifecycle, and production release workflows.
- Integrated Stripe and Apple Pay payment flows with webhook-based payment validation, supporting real marketplace transactions, seller onboarding, platform fee logic, and payouts.
- Built production iOS architecture using SwiftUI, MVVM, Keychain and Face ID authentication, cached media loading, REST APIs, and backend-integrated state management.
- Built and deployed Node.js-backed services with Supabase as the database, AWS S3 for media storage, Railway for backend deployment, and REST APIs powering iOS client workflows.
- Applied Claude, ChatGPT, GitHub Copilot, and AI agent-assisted development practices to accelerate implementation, debugging, refactoring, and release validation.

Paycom Software, Inc. | Software Developer IV | Grapevine, TX | 05/2023 – 06/2025

- Developed and optimized HR and payroll systems on a platform serving 7M+ users, improving performance and operational stability at scale.
- Analyzed database schemas and optimized SQL queries for an HR workflow, reducing measured page load time by ~90%.
- Re-architected a reporting system using incremental processing and caching, reducing database load by 50%+ and increasing maximum report output capacity by 10x.
- Collaborated with PMs, QA, and cross-module teams in Agile workflows to resolve integration and deployment defects through log analysis, debugging, and CI/CD release testing.

Nth Technologies | Software Engineer | Remote | 11/2020 – 05/2023

- Owned backend development, database design, and large-scale client data migrations for 12+ major clients, including automated data transformation workflows and client-specific backend/database solutions.
- Worked directly with physicians, clinic stakeholders, and third-party engineers to clarify requirements, resolve technical issues, and reduce client onboarding time by ~90% while preserving production data integrity.

SKILLS

AI/LLM: Claude, ChatGPT, GitHub Copilot, OpenAI API, RAG workflows, prompt engineering, AI agent-assisted development

Languages: Python, Swift, PHP, JavaScript, SQL

Backend & Database: Node.js, REST APIs, PostgreSQL, MySQL, Supabase

Infrastructure: AWS S3, Linux servers, Docker, Railway, GitLab CI/CD

Mobile & Payments: iOS, SwiftUI, MVVM, Stripe, Apple Pay, TestFlight, App Store Connect

EDUCATION

Bachelor of Science in Computer Science | Texas A&M University | 2019
